Phase II Activation of the Heat Contingency Plan

Phase II of the Heat Contingency Plan will be activated from Sunday, 06/19/16 – Tuesday, 06/21/16. Due to forecasts of dangerous and excessive heat.

- Per the National Weather Service (NWS):
 - Dangerous Heat expected Sunday through Tuesday over much of Southern CA (coastal areas and exception).
 - Sundowner winds expected Saturday afternoon/evening will keep lows into Sunday morning with little relief.
 - A weak offshore flow over far southern CA could break numerous high temperature records Sunday and even more on Monday.
 - Warmest temperatures will be Monday with highs 15-20 degrees above normal for this time of year.
 - Temperatures Monday could be the hottest recorded in a decade.
 - Heat of this magnitude will have impacts for even the general population if precautions are not taken.
 - See attached NWS Slide deck on the heat event.
- State's Top Emergency Manager, Public Health Officer Urge Californians to Prepare for Excessive Heat Beginning this Weekend
 - In response to forecasts of excessive heat early next week, especially in Southern California, state officials are urging Californians to prepare for potentially record-breaking temperatures starting Sunday. State agencies and utility companies have already implemented plans and taken steps in anticipation of the heatwave. (See link for entire Press Release)

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

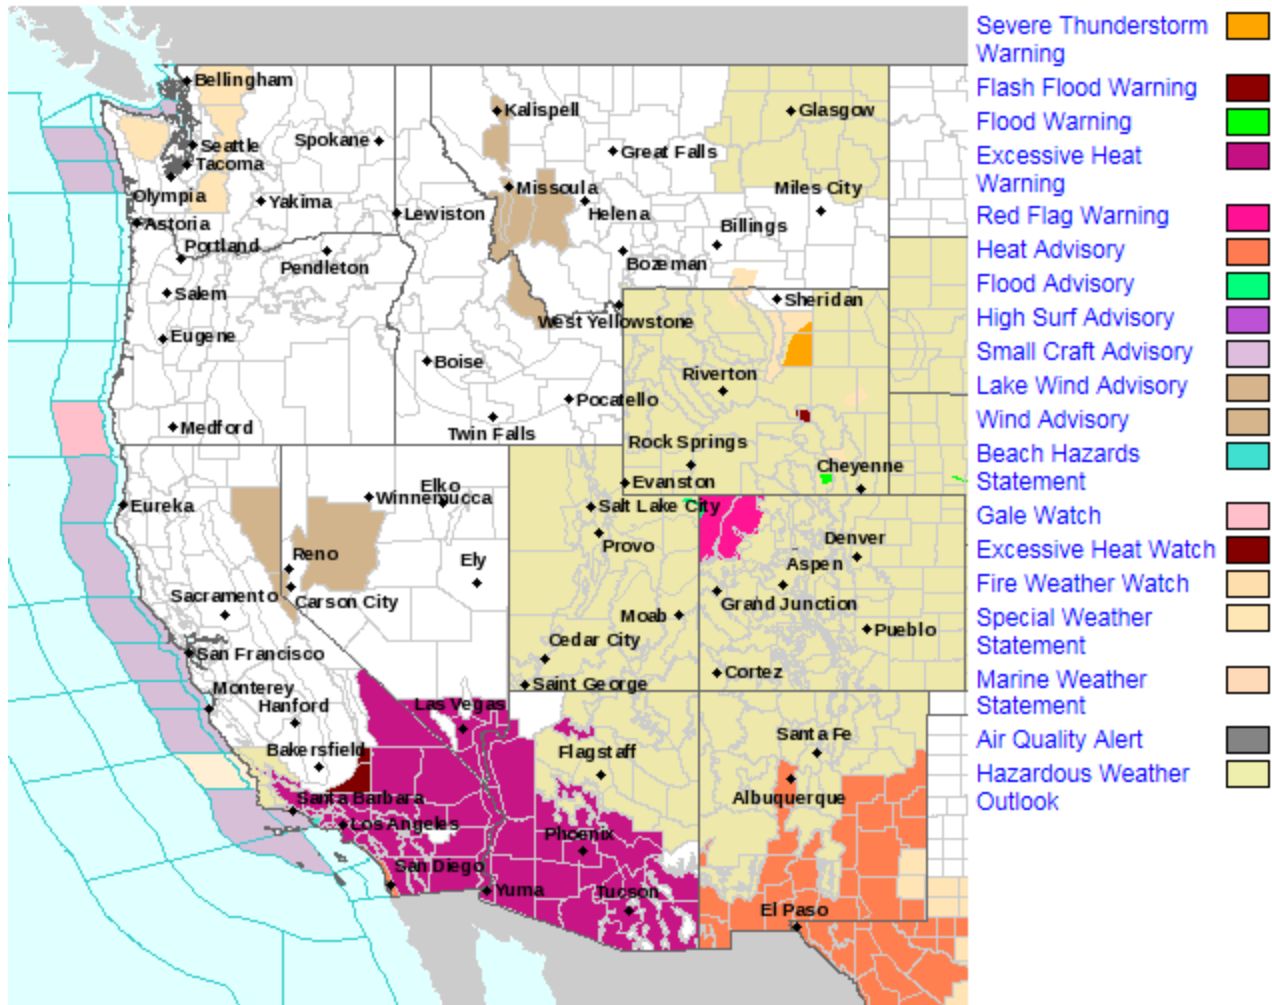

The unseasonably strong low pressure system will produce another cool, cloudy, and breezy day throughout Northern California region. These conditions may continue into early Saturday in eastern areas. The majority of the region will see periods of light rain. The highest chances will be in the north and the lowest chances will be in the south. Isolated thunderstorms will continue to be possible, and they will likely be quite wet. Snow levels will be 6500 ft or higher. Temperatures will be 10-20 degrees below normal today. Although winds will be gusty, especially east of the Cascade-Sierra crest today, humidity will remain above 30%. On Saturday the low pressure system and wet unsettled weather will lift off to the north east as strong high pressure over the Desert southwest pushes to the northwest. This pattern will produce a very rapid warming and drying trend across the region. Triple digit heat is expected to develop for the warmer inland areas early next week with potential for the warmest inland locations to reach highs around 108. Relative Humidity (RH) will drop to 8-18% in inland areas early next week with many areas seeing overnight RH recovery only in the 30-45% range. Periods of light north to northeast surface winds will enhance the hot and dry conditions from the western Sierra slopes to the coast beginning Sunday. At this time computer models are showing a potential of isolated somewhat dry thunderstorms from Tuesday night through Thursday.

SOUTHERN CALIFORNIA

High pressure over Northern Mexico will move into New Mexico today and then expand over the entire Southern United States causing a significant warming and drying trend into early next week. Maximum temperatures will be near to a little above normal today, with upper 60s and 70s across the mountains and 80s to low 90s in the valleys. The warmest day will be on Monday, when most mountain locations will be in the 90s and valley locations between 105 and 110. Minimum humidity will be mainly between 15% and 30% away from the coast today, but the deserts will be between 8% and 15%. Widespread minimum humidity in the single digits will start over Southern California Saturday and over Central California Sunday. These single digit readings will continue through Tuesday along with poor nighttime humidity recovery. Temperatures will cool several degrees and minimum humidity will increase to 12% to 25% Wednesday and Thursday. Southeast to south flow aloft may also bring isolated afternoon thunderstorms to the mountains and deserts Wednesday and Thursday. South to west afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes through Saturday and then again Wednesday and Thursday of next week.
